# NeMTSS | Problem-Solving Model

It is essential for NeMTSS teams to use data to guide decision-making at all levels of support — district, school, grade, classroom and individual.

A problem-solving model provides structure to identify, develop, implement and evaluate strategies to improve the performance of all students.

Problem-Solving Model

IDENTIFY — Define what is occuring

ANALYZE — Collect data & form plan

IMPLEMENT — Act upon plan

REFLECT — Evaluate what is working

Components

- Inclusive of all students
- Uses evidence-based practices
- Effectiveness is based on both fidelity of the process and in the implementation of the instruction/intervention plan
- Applies to all tiers of instruction/intervention and at all levels
- Iterative process that may require multiple cycles to find solutions
